
the FFT sees the record as periodic
end of record, $x(t)$
its periodic copy, $x(t-T)$
jump at the wrap: $x(0) \neq x(T)$
x/σ_x
t (s)
velocity over the last 0.15 s, 1% noise
true
spectral (FFT)
state-space smoother
$\dot{x}/\sigma_{\dot{x}}$
t (s)
